

Mercedes W124 Keyless Entry Installation Manual

1. Locate door vacuum pump. The vacuum pump is under the rear seat on the right side of the vehicle sheathed in a grey foam block.
2. Unplug the round plug from the pump. Find the 2 GREEN wires on the round plug. (White/Green in some cars) You will have to cut one of these wires. Usually the correct wire is a little looser in the wire harness. Try both wires with a voltmeter. It should show 12V when the key in a door lock is turned one direction, and 0V when it is turned in the other. Pick a green wire and cut it. Be careful not to ground the cut green wire or you will blow a fuse.
3. Connect the WHITE power wire from remote control unit to the cut green wire from the round connector. Connect the ORANGE/BLACK power wire to the cut green wire from the harness.
4. Connect orange and white/black wires together.
5. Yellow /black - 12 volts Battery
6. Yellow - Negative /Ground.
7. Locate black/white and black/green wires from light switch on a steering column. Connect brown wire from receiver to diodes (supplied) and connect diodes to black/white black /green wires.
8. Red/black wire -optional for trunk release.
9. Red/slim wire- optional window roll up module.
10. Red wire- +12 volts Battery.
11. Black Wire -Ground/ Negative

1. **Unlock:** Press the button  on a remote transmitter ones to unlock , directional lights will blink twice.
2. **Lock:** Press the button  on the remote transmitter ones to lock and directional lights will blink ones.
